

Sustainment Concept Paper
FY2010 HSGP UASI Interoperability Meeting
Work Session 5
12/15/09

Project: NCR SharePoint Server Maintenance

Project Budget: Year 1: \$18,000 ; Year 2: \$18,000

Responsible Party: COG owns the SharePoint server under direction from the CIOs and IC

Collaborating R-ESF/RPWG: Supports multiple RESFs and RPWGs

Point of Contact: Dave McMillion (dmcmillion@mwkog.org); 202-962-3708
George Danilovics (gdanilovics@mwkog.org); 202-962-3248

Project Summary

RESFs and the CAOs use the SharePoint portal at <https://ncrportal.mwkog.org> in order to collaborate in a secure online environment. The portals allow the groups to share contact information, calendars, and documents online. Each person accessing the portal has their own unique login. This provides granular security within the portals. There are currently 25 active portals on the server being used by RESFs, RPWGs, and other working groups.

The SharePoint portal consists of a web server and a SQL server. Both are also dependent on Windows Active Directory. The Active Directory domain NCRNET.US provides user authentication to the SharePoint portals and to the DEH development environment. The servers are scheduled to be upgraded during the 2009/2010 winter using an approved UASI 09 project grant.

The maintenance request provides funding to cover hosting in COG's data center. In addition to Internet access, power, cooling, and backup support, COG's IT staff also provide technical support to SharePoint users and do not charge technical support time to a UASI grant. The technical support is provided as a service from COG in support of this regional capability. COG's data center charges \$500 per server per month for hosting services. 3 servers * 12 months = \$18,000 annual hosting fee.
